ASHUTOSH GHILDIYAL

Software Engineer | Java Backend | Spring Boot | Microservices | Distributed Systems

Ghaziabad, India | +91-7042706499 | ashutoshghildiyal1998@gmail.com | LinkedIn | LeetCode

PROFESSIONAL SUMMARY

Software Engineer with 5+ years of software development experience building production applications, with a strong focus on Java backend engineering, Spring Boot, REST APIs, microservices, and distributed systems. Hands-on experience designing event-driven architectures using Apache Kafka, building data-intensive services with PostgreSQL/MySQL and MongoDB, and implementing low-latency access patterns with Redis. Strong foundation in Data Structures & Algorithms, OOP, LLD, HLD, and System Design, with a focus on building scalable and reliable backend systems.

TECHNICAL SKILLS

Languages: Java, SQL

Backend: Spring, Spring Boot, REST APIs, Spring Data JPA, Hibernate, Microservices, Event-Driven Architecture

Messaging & Streaming: Apache Kafka

Databases: PostgreSQL, MySQL, MongoDB, SQLite

Caching & Search: Redis, Elasticsearch

Architecture & CS: Data Structures & Algorithms, OOP, Design Patterns, LLD, HLD, System Design, State Machines, Distributed Systems

Tools: Docker, Maven, Git, GitHub Actions, CI/CD, JUnit, Mockito

DSA & Algorithms: Data Structures & Algorithms

PROFESSIONAL EXPERIENCE

ANDROID DEVELOPER — Revisewise Education Solutions Pvt. Ltd. | Sept 2022 – Present

- Led development and maintenance of multiple production Android applications used by thousands of active users.
- Implemented Java-based business logic and integrated REST APIs while collaborating closely with backend engineering teams.
- Owned end-to-end feature delivery including implementation, release coordination, production monitoring, debugging, and fixes.
- Diagnosed and resolved production issues, improving application stability and reducing user-impacting defects.
- Worked closely with backend engineers on API integrations and system behavior, strengthening expertise in backend engineering and distributed application workflows.

ANDROID DEVELOPER — Globtier Infotech | Feb 2021 – Sept 2022

- Developed Android modules using clean architecture and reusable components.
- Integrated REST APIs with robust network failure handling and local persistence.
- Collaborated in agile teams across debugging, code reviews, testing, and feature delivery.
- Built strong foundations in SDLC practices, Git workflows, debugging, and collaborative software development.

BACKEND PROJECTS

Scalable Ride-Hailing System | Java, Spring Boot, Microservices, Apache Kafka, Redis Geospatial, PostgreSQL, Spring Security, JWT, Docker

- Designed a microservices-based ride-hailing platform with dedicated User, Ride, and Driver services.
- Implemented asynchronous ride workflows using Apache Kafka for decoupled service communication.
- Built real-time driver location tracking and nearby-driver discovery using Redis Geospatial APIs.
- Implemented ride lifecycle management with explicit state transitions and JPA optimistic locking for concurrent updates.
- Secured APIs using Spring Security, stateless JWT authentication, and BCrypt password hashing.

Distributed FinTech Transaction Processing System | Java, Spring Boot, Microservices, Apache Kafka, PostgreSQL, Redis, Docker

- Designed an event-driven financial transaction platform with Account, Transaction, Fraud Detection, and Notification services.
- Reduced account lookup latency by 68% (145 ms → 46 ms) using Redis caching.
- Reduced synchronous transaction-path latency by decoupling non-critical fraud detection and notification workflows through Apache Kafka.
- Implemented idempotent transaction processing to safely handle retries and duplicate requests without double-processing financial operations.
- Implemented rule-based fraud detection and automated account-freeze workflows with audit history using PostgreSQL and JPA/Hibernate.

Distributed Logistics & Delivery Tracking System | Java, Spring Boot, Microservices, Apache Kafka, PostgreSQL, Redis, Docker

- Designed an event-driven logistics platform spanning Shipment, Warehouse, Route, Tracking, and Notification services.
- Implemented asynchronous service communication using Apache Kafka for shipment lifecycle events.
- Implemented event sourcing in the Tracking Service using immutable shipment events to rebuild state when required.
- Designed shipment lifecycle management using explicit state-machine transitions.
- Implemented Redis caching with database fallback for low-latency reads and improved resilience.

SYSTEM DESIGN & ENGINEERING

- Microservices architecture and service decomposition
- Event-driven architecture with Apache Kafka
- Distributed transactions, Saga patterns, idempotency, and retry mechanisms
- Caching and performance optimization with Redis
- Database design, indexing, concurrency, and optimistic locking
- API design, fault tolerance, LLD, and HLD

EDUCATION

Bachelor of Technology in Information Technology — Dr. A.P.J. Abdul Kalam Technical University | 2020
